Plumbing Supply and More Expands Boiler Parts Inventory for Hydronic Heating Contractors

September 10, 2026

Caln Township, Pennsylvania - September 10, 2026 -
A hydronic heating system is only as reliable as its individual components, and a single degraded part can undermine the performance of an entire installation. A primary control that cannot complete a clean ignition sequence, or a Flo-Chek valve that no longer seals against gravity flow, can propagate into reduced comfort, higher fuel consumption, or a full no-heat service call. For contractors and facility managers, sourcing exact-match boiler parts has become a defining factor in keeping residential and light commercial systems running through the heating season.

Plumbing Supply and More positions itself as a resource for that need, maintaining a boiler parts category built around exact-match components for a broad range of system types. The inventory spans hydronic Flo-Chek valves, boiler manifold kits, oil burner primary controls, hot surface igniters, steam radiator air valves, power venters, ignitor assemblies, and combi boiler replacement kits. Those components serve systems ranging from cast iron steam boilers in historic buildings to high-efficiency condensing gas boilers in new construction.

The company's Boiler Parts & Accessories selection includes recognized manufacturer brands such as Taco, Weil-McLain, Watts, and Hoffman. Alongside replacement components, Plumbing Supply and More stocks supporting diagnostic tools relevant to boiler servicing, including water pressure gauges, thermometers, gas leak detectors, and combustion analyzers used for furnace and boiler tuning.

Accurate parts procurement matters to technicians and facility managers for practical reasons. When a replacement component is matched to the specific boiler model and system type, faults can be diagnosed and resolved before they escalate into complete system failure or a no-heat emergency during cold weather. Mismatched or generic substitutions, by contrast, can extend downtime and complicate troubleshooting.

"A hydronic system rarely fails all at once; it fails one component at a time," said a spokesperson for Plumbing Supply and More. "The goal behind the Plumbing Supply and More Boiler Parts category is to let a technician find the exact control, valve, or igniter that matches the equipment in front of them, so a small repair stays a small repair."

The boiler category sits within the company's broader operation as a full-service supply house stocking more than 20,000 parts across multiple warehouses. The business offers wholesale pricing, free shipping on qualifying orders, and a 30-day return policy, positioning it as a trade-grade option for both licensed contractors managing commercial hydronic systems and homeowners handling their own boiler maintenance.

"Facility managers and independent contractors face the same core challenge, which is downtime during the coldest months," the spokesperson added. "Having verified components and diagnostic tools in one catalog shortens the path from a failed part to a working system."

Plumbing Supply and More is a full-service plumbing and HVAC supply house with a history spanning 75 years, offering professional-grade supplies across categories that include pipe and fittings, plumbing components, hangers and fasteners, hydrants, and hydronic heating equipment. The company maintains a comprehensive online catalog serving professional contractors and do-it-yourself customers alike.

Contractors and facility managers can browse boiler parts at plumbingsupplyandmore.com.
